Tree Planting Campaign at GVKPGSL

Only when the last tree has died, the last river has been poisoned and the last fish has been caught, will we realize that we cannot eat money?

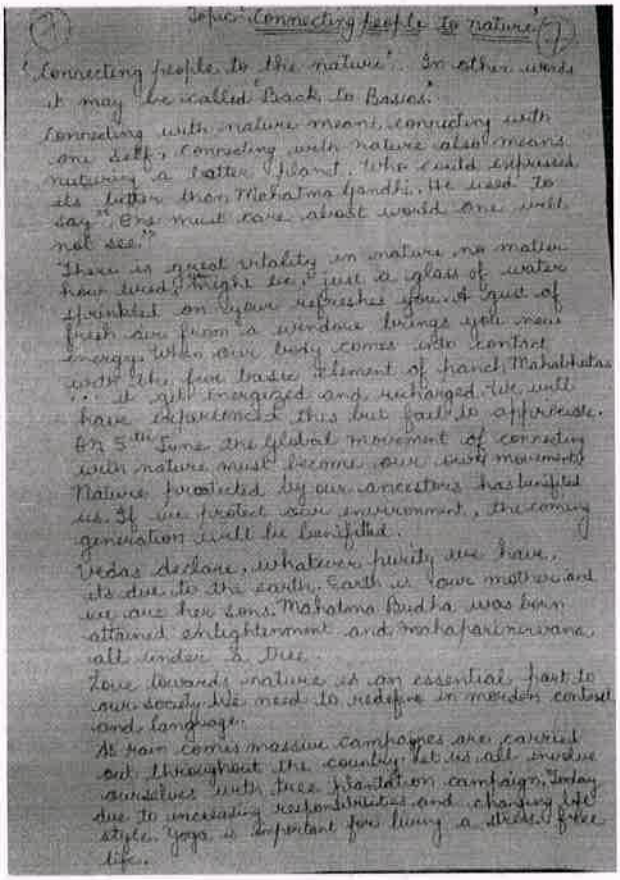
Topic- Connecting People To Nature



Topic: Connecting People to nature

'Connecting people to the nature'. In other words it may be called 'Back to Basics'.

Connecting with nature means connecting with one self. Connecting with nature also means nurturing a better planet. Who could expressed its better than Mahatma Gandhi. He used to say "One must care about world one will not see."

There is quiet vitality in nature, no matter how tired I might be, just a glass of water sprinkled on face refreshes you. A gust of fresh air from a window brings you new energy. When our body comes into contact with the five basic element of nature Mahabhutas i.e. if get energized and recharged. We will have experienced this but fail to appreciate.

For 5th June the global movement of connecting with nature must become our daily movement. Nature protected by our ancestors has benifited us. If we protect our environment, the coming generation will be benifited.

Vedas declare, whatever purity we have, its due to the earth. Earth is our mother and we are her sons. Mahatma Buddha was born attained enlightenment and mahaparinirvana all under a tree.

Love towards nature is an essential part to our society. We need to redefine in modern context and language.

At your comes massive campaigns are carried out throughout the country. Let us all involve ourselves with tree plantation campaign. Today due to increasing pollutants and changing life style. Yoga is important for living a stress free life.

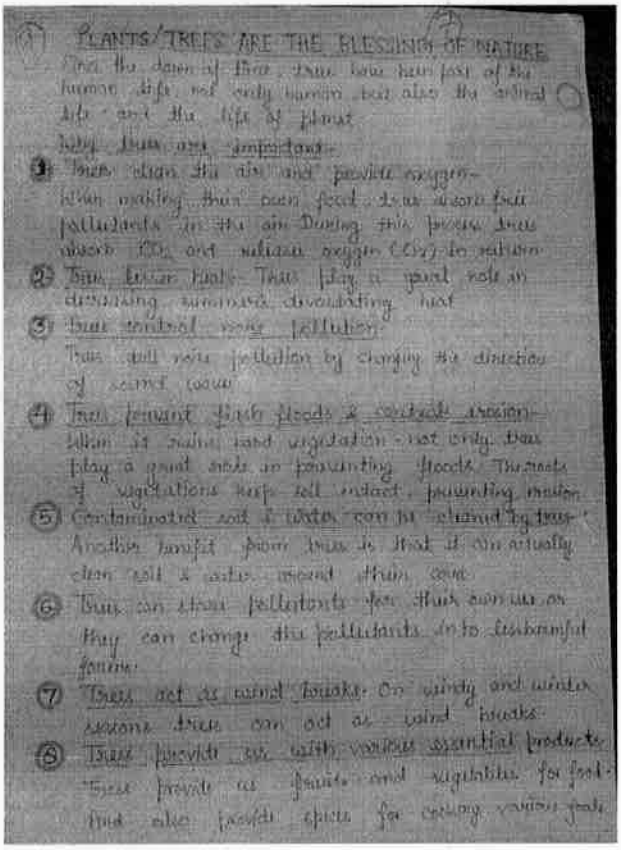
Topic- Plants /Trees are the Blessing of the Nature



PLANTS/TREES ARE THE BLESSING OF NATURE

Since the dawn of time, trees have been part of the human life not only human but also the animal life and the life of plant.

Why trees are important-

1. Trees clean the air and provide oxygen- While making their own food trees absorb harmful pollutants in the air. During this process trees absorb CO_2 and release oxygen (O_2) to nature.
2. Trees lower heat- Trees play a good role in decreasing summers devastating heat.
3. Trees control noise pollution- Trees also help reduce pollution by changing the direction of sound wave.
4. Trees prevent flash floods & control erosion- When it rains land vegetation not only trees play a great role in preventing floods. The roots of vegetations help soil retain, preventing water.
5. Contaminated soil & water can be cleaned by trees- Another benefit from trees is that it can actually clean soil & water around them also.
6. Trees can clean pollutants for them such as they can change the pollutants into less harmful forms.
7. Trees act as wind breaks- On windy and winter seasons trees can act as wind breaks.
8. Trees provide us with various essential products- Trees provide us fruits and vegetables for food. Trees also provide spices for cooking various foods.
