

# 108 AMBULANCES GET AUTO TRACKING SYSTEM

**Chennai:** You may just find the fleet of 108 EMRI ambulances taking up their efficiency by a couple of notches. Operating on a high-tech process that combines the powers of GPS and GIS to become an automated Vehicle Tracking System that will monitor the location of every ambulance at every time. "Until now, our call operators would manually assign an ambulance to a case as soon as a distress call comes in. We have now automated the entire process," explained B.N. Sridhar, Chief Operating Officer of GVK Emergency Management and Research institute.
